Greg
Char

There are quite a few things attached.

There are three short articles that provide some perspective on science and engineering support during a crisis. A couple of them come from DOI and one is authored by Anastas and Cindy.

There is an attached PowerPoint that contains the agenda.

I made .pdfs out of the EOC spot reports that Greg forwarded yesterday.

I haven't yet written a narrative that could accompany these attachments, but something will be necessary so the deputies have some context.
